The Goldman Sachs Investment Grade Credit Fund invests primarily in investment grade fixed income securities. The Fund's investments in fixed income securities are subject to the risks associated with debt securities generally, including **credit, liquidity and interest rate risk**. Any guarantee on **U.S. government securities** applies only to the underlying securities of the Fund if held to maturity and not to the value of the Fund's shares. **Foreign and emerging markets investments** may be more volatile and less liquid than its investment in U.S. securities and are subject to the risks of currency fluctuations and adverse economic or political developments. **Derivative instruments** may involve a high degree of financial risk. These risks include the risk that a small movement in the price of the underlying security or benchmark may result in a disproportionately large movement, unfavorable or favorable, in the price of the derivative instrument; the risk of default by a counterparty; and liquidity risk.

The 30-Day Distribution Rate is calculated by taking the annualized accrued net income (income less expenses, also known as the declared dividend) of the last 30 days, and dividing by the period end NAV. The net income is annualized by taking the 30 days of declared dividends, dividing by 30, and multiplying by 365.

Holdings and allocations shown are unaudited, and may not be representative of current or future investments. Holdings and allocations may not include the Fund's entire investment portfolio, which may change at any time. Fund holdings should not be relied on in making investment decisions and should not be construed as research or investment advice regarding particular securities. Current and future holdings are subject to risk.

Option Adjusted Duration: a measure of the sensitivity of a bond's price to interest-rate changes, assuming that the expected cash flows of the bond may change with interest rates.

Credit Adjusted Duration is a bond's option adjusted duration, adjusted for the bond's spread and the impact this may have on the bond's sensitivity to changes in interest rates.

Spread Duration: a measure of the sensitivity of a bond's price to spread changes.

The Barclays U.S. Credit Bond Index (formerly the Lehman Brothers U.S. Credit Index) is an unmanaged index that is unbundled into pure corporates (industrial, utility, and finance, including both U.S. and Non-U.S. corporations) and non-corporates (sovereign, supranational, foreign agencies, and foreign local governments). The Index figures do not reflect any deduction for fees, expenses or taxes. It is not possible to invest directly in an unmanaged index.

Dividends are accrued daily and paid Monthly.

The Net Asset Value (NAV) is the market value of one share of the Fund. Percentages may not sum to 100% due to rounding.

The calculation of the **30-Day Standardized Subsidized Yield** is mandated by the SEC and is determined by dividing the net investment income per share earned during the period by the maximum public offering price ("POP") per share on the last day of the period. This number is then annualized. The 30-Day Standardized Subsidized Yield reflects fee waivers and/or expense reimbursements received by the Fund during the period. Without waivers and/or reimbursements, yields would be reduced. This yield does not necessarily reflect income actually earned and distributed by the Fund and, therefore, may not be correlated with the dividends or other distributions paid to shareholders. The **30-Day Standardized Unsubsidized Yield** does not adjust for any fee waivers and/or expense reimbursements in effect. If the Fund does not incur any fee waivers and/or expense reimbursements during the period, the 30-Day Standard Subsidized Yield and 30-Day Standardized Unsubsidized Yield will be identical.

Treasury includes holdings of government securities issued by the United States Department of Treasury.

Agency Collateralized includes holdings of U.S. government-backed agency (e.g., Ginnie Mae, Freddie Mac, Fannie Mae) mortgage-backed securities and may include to-be-announced (TBA) mortgage-backed securities.

Cash may include local currency, foreign currency, short-term investment funds, bank acceptances, commercial paper, margin, repurchase agreements, time deposits, variable-rate demand notes, and/or money market mutual funds. The Cash category may show a negative market value percentage as a result of a) the timing of trade date versus settlement date transactions and/or b) the portfolio's derivative investments, which are collateralized by the portfolio's available cash and securities. Such securities are AAA rated by an independent rating agency, have durations between -2 and 1 years, and are limited to the following sectors: governments, agencies, supranationals, corporates, and agency-backed adjustable-rate mortgages.

Derivatives (guidelines permitting) may include futures, swaps, options, and forwards and may be used for hedging purposes and/or to express outright investment views. The table's market value percentage total for derivatives reflects aggregated unrealized gains or losses on all derivative positions.

This Fund and its respective benchmark have not been rated by an independent rating agency. The credit allocation provided refers to the Fund's underlying portfolio securities. GSAM may receive credit quality ratings on the underlying securities of the Fund and its respective benchmark from the three major rating agencies: S&P, Moody's and Fitch. GSAM develops the credit quality breakdown for both Funds and their respective benchmarks by taking the highest rating if more than one agency rates a security. This method may differ from the method independently used by benchmark providers. GSAM will use a single rating if that is the only one available. Securities that are not rated by all three agencies are reflected as such in the breakdown. GSAM converts all ratings to the equivalent S&P major rating category when illustrating credit rating breakdowns. Ratings and fund/benchmark credit quality may change over time. Unrated securities do not necessarily indicate low quality, and for such securities the investment adviser will evaluate the credit quality.

This material is not authorized for distribution unless preceded or accompanied by a current prospectus or summary prospectus, if applicable.

Investors should consider a fund's objectives, risks, and charges and expenses, and read the summary prospectus, if available, and the prospectus carefully before investing or sending money. The summary prospectus, if available, and the Prospectus contains this and other information about the Fund.
